Serverless Voted System

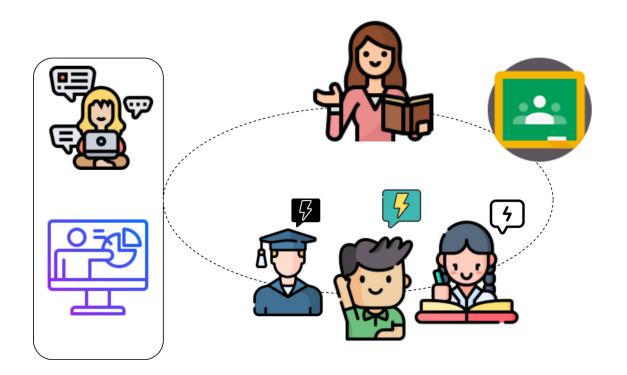

Team2 羅昭艾 方思涵 林彥輝

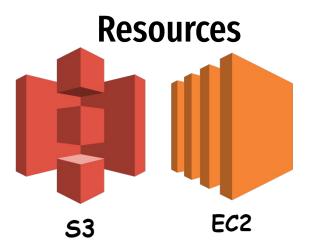

Agenda

Introduction

- I. AWS S3
- II. AWS EC2
 - A. JQuery
 - B. AjaX
 - C. Python Flask
- III. AWS DynamoDB
- IV. AWS Lambda

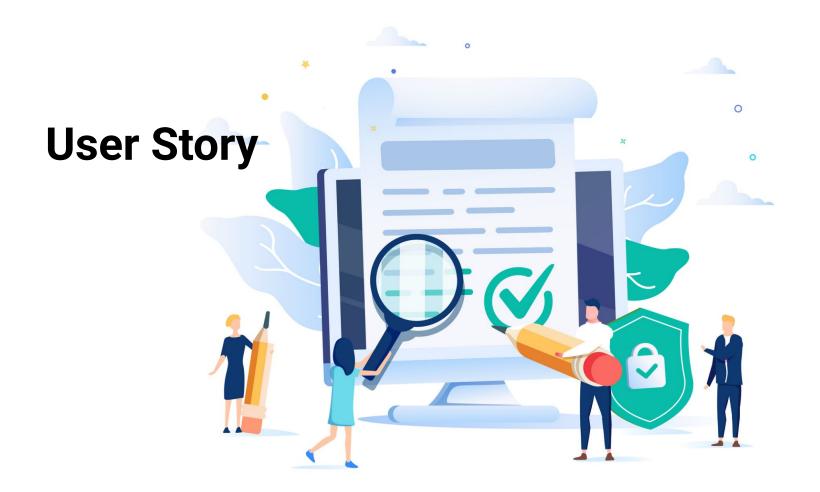

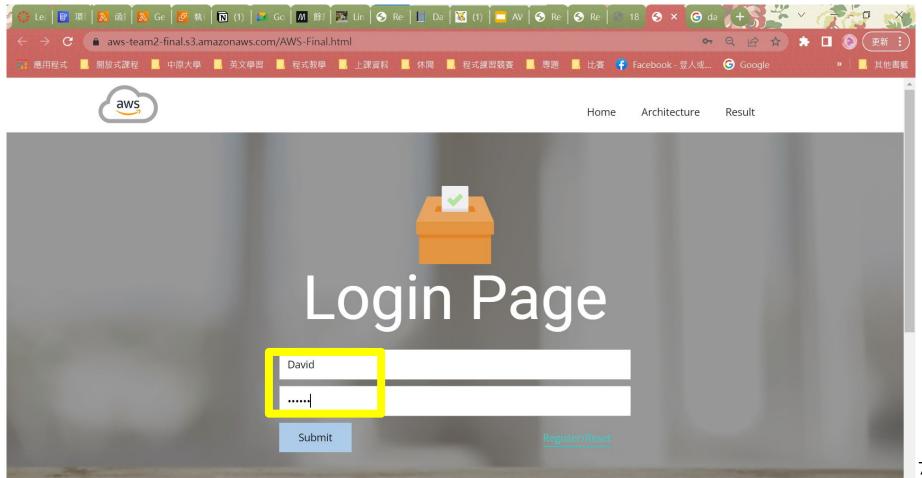

老師端的起始頁面, 按下create new poll按鈕後 可以跳轉至建立新投票畫面

Lea | 😰 服形 | 🔉 函复 | 🔊 Get | 🙋 執行 | 🗖 (1) | 🎎 Go | M 餘集 | 🌌 Linc | 🜖 Res | 📗 Day | 🕉

▲ 不安全 | 18.209.63.6:8888/polls

學生進入登入畫面,輸入帳號與密碼進行身分驗證

Show poll:

學生以登入身分進入當前正在進行的投票畫面

Question: 最喜歡的城市

Options:

○台桃園●台竹園●白竹園

○百歳

○ 台南 Vote

以單選的方式做勾選, 並按下投票按鈕

Result

Response from AWS Lambd: ['a6b54c20a7b96eeac1a911e6da3124a560fe6dc042ebf270e3676e7095b95652', '台中']

跳轉至結果畫面, 代表投票成功

使用DynamoDB trigger來即時更新 網頁上的票數

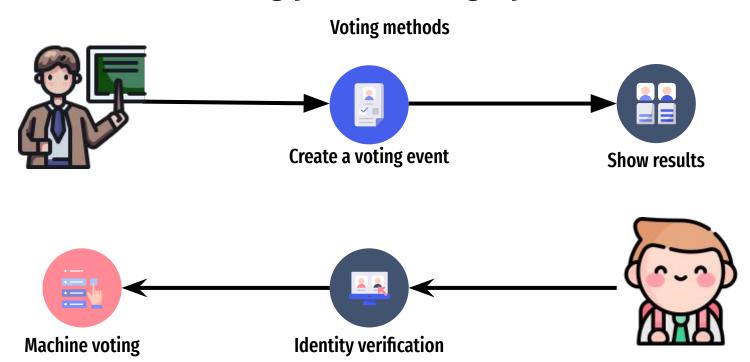

台中

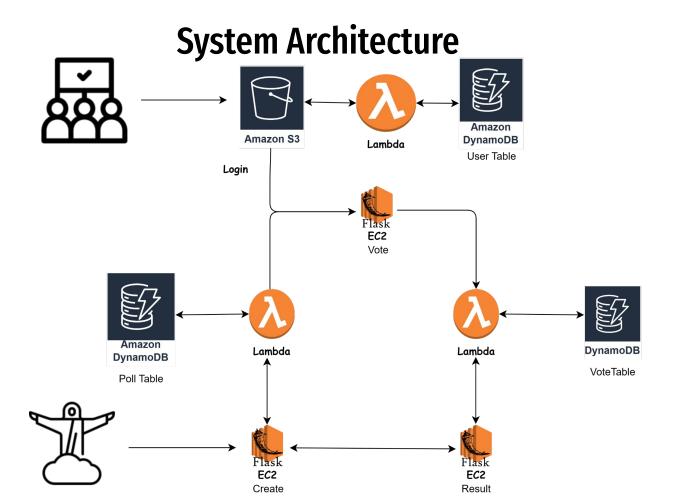

使用長條圖來顯示各選項投數結果

System Architecture

Voting process infographics

```
import urllib.parse
import urllib.request
import json
from flask import Flask, render template, request, redirect, url for, jsonify
app = Flask( name )
userName = ""
@app.route('/polls/vote', methods=['GET', 'POST'])
def vote_poll():
    global userName
   if request.method == 'POST':
        lambda endpoint = 'https://d7etp1xo89.execute-api.us-east-1.amazonaws.com/defaul
t/SaveUserVote'
        vote = request.form.get('option')
        payload = {
            'name': userName,
            'option': vote
        data = json.dumps(payload).encode('utf-8')
        # 構建請求對象
        reg = urllib.request.Request(lambda endpoint, data=data, method='POST')
        req.add_header('Content-Type', 'application/json')
        # 發送請求
        with urllib.request.urlopen(req) as response:
            result = json.loads(response.read())
        # 將結果傳遞給HTML
        return render_template('result.html', result=result)
```

Student_app.py

http://18.209.63.6:8080/polls/vote?name=f464d7d71c06e47a535ce4 41aa202aa717cddeab902a45b0c283aac7a9a090d7

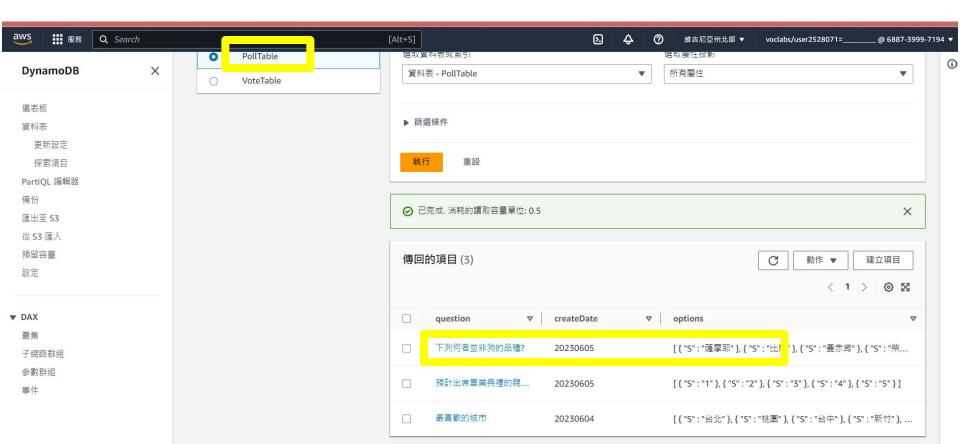

```
else:
       userName = request.args['name']
       lambda_endpoint1 = 'https://c7jganrqgj.execute-api.us-east-1.amazonaws.com/defau
lt/TakePoll'
        # 構建請求對象
       reg = urllib.reguest.Reguest(lambda endpoint1, method='GET')
       req.add header('Content-Type', 'application/json')
        # 發送請求
       with urllib.request.urlopen(req) as response:
           result = json.loads(response.read())
       question = result['question']
       options = result['options']
       return render template('vote poll.html', question=question, options=options)
if name == " main ":
   app.run(host="0.0.0.0", port=8080, debug=True)
```

在EC2中開啟一個instance,用來執行學生端與老師端的投票系統與網頁

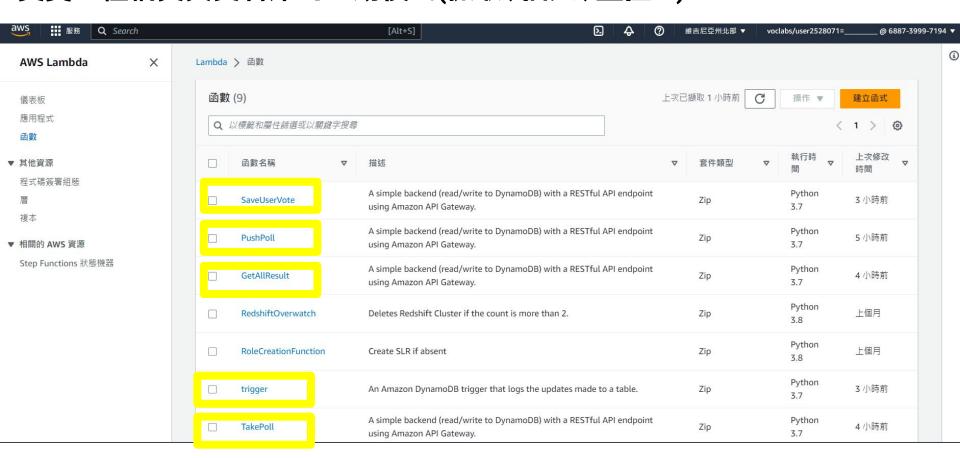

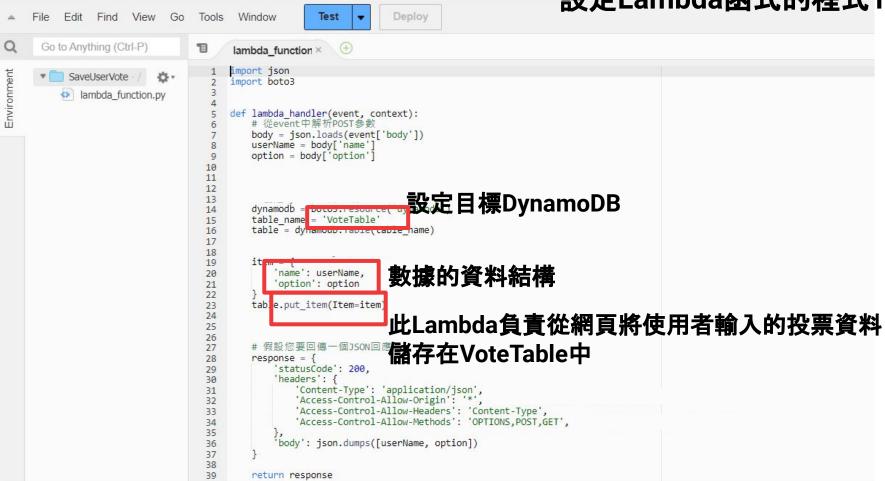

DynamoDB中的PollTable -負責儲存歷屆投票的題目與選項,並記錄建立時間

使用 Lambda 從 DynamoDB 中獲取與儲存資料,每一個Lambda 函式會 負責一種網頁與資料庫的互動模式(抓取、插入、監控...)

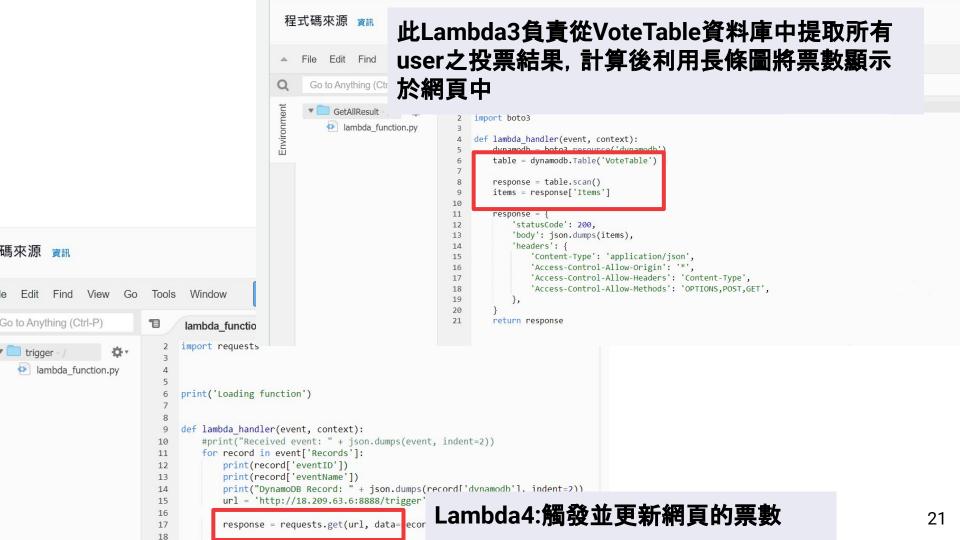

設定Lambda函式的程式1

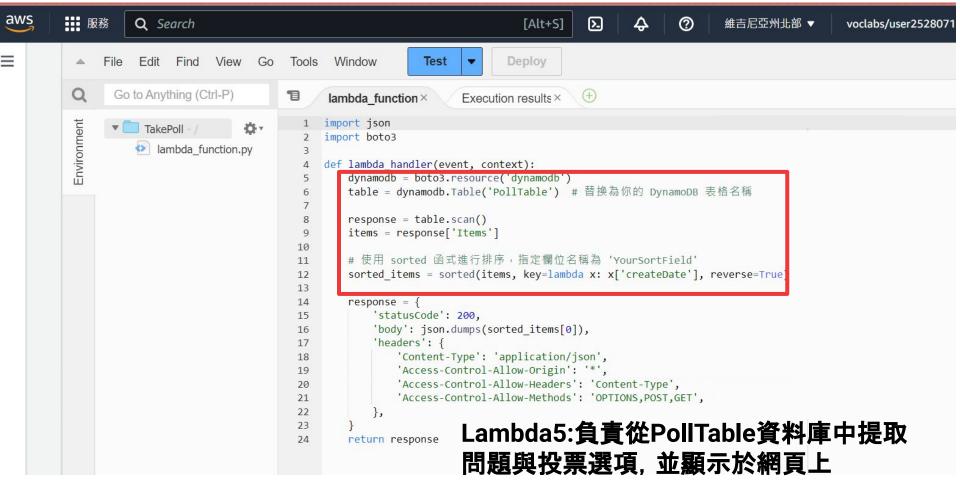

40

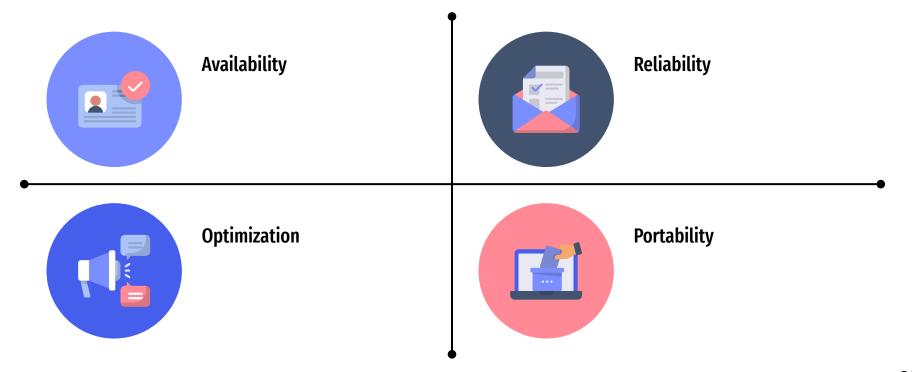

Lambda函式2

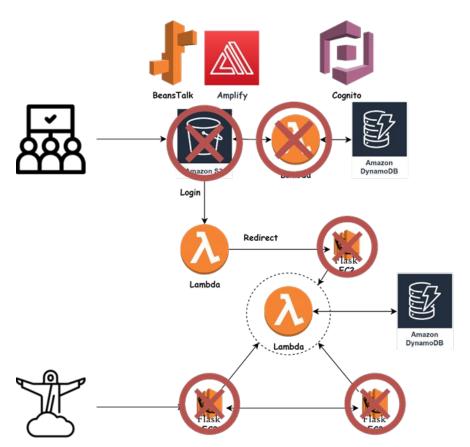

Cloud Properties

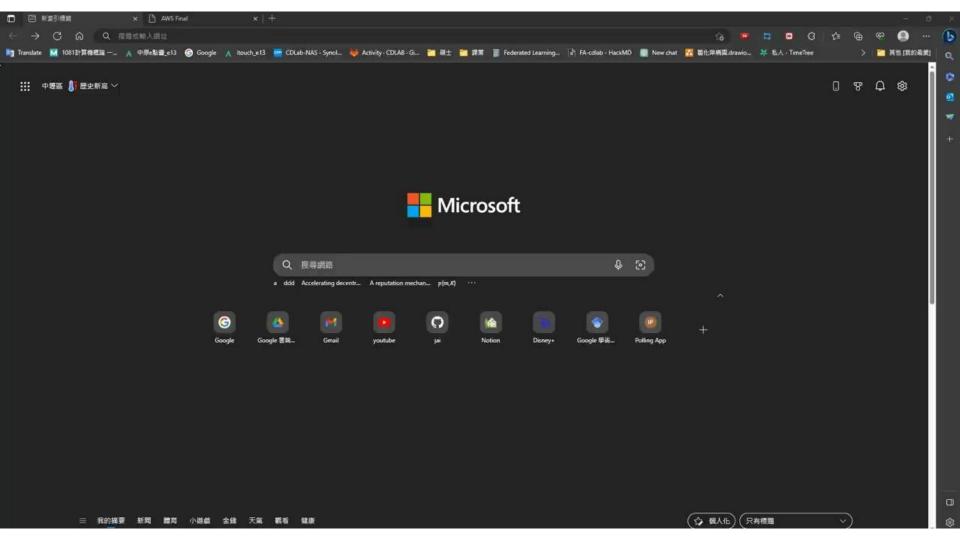

Lesson Learns from Project & Problems

- 1. Coding Skill (Flask, Javascript, RESTful API)
- 2. Serverless
 - a. Azure vs. AWS
- 3. 過程中換題目
 - a. Limited GPU & Inference Type VM
 - b. IAM

Future Work?

Thanks for listening!
